Tests Conducted

Positive = A positive test result indicated the presence of Cr(VI)at the time of testing, equal to or greater than threshold of 1 mg/kg for spot test procedure or 0.02 mg/kg for boiling -water-extraction procedures with a sample surface area of 50cm² used. However, it shall not be interpreted as the Cr (VI) concentration in the coating layer of the sample and should not be used as a method detection limit for this qualitative test.

Negative = A negative test result indicated above positive observation was not found at the time of testing. When the spot-test showed a negative result, the boiling-water-extraction procedure shall be used to verify the result.
