Carlton® Non-Metallic Rigid Conduit, Fittings and Accessories

Carlton® P&C Flex™ Corrugated Flexible Conduit

Carlton® P&C Flex™ Non-Metallic Corrugated Conduit makes power and communication installations faster and easier by providing maximum installation flexibility. The corrugated design is flexible enough to accommodate any degree of bend requirement. Unlike rigid conduit, it has a tight bend radius, making this product ideal for shallow trenches.

P&C Flex™ is manufactured to IPS dimensions and can be used with any existing conduit system using standard fittings. It is UV resistant and suitable for a variety of applications, including direct burial, under bridges, service entrance/FTTx terminations, manhole terminations, pedestal/enclosure terminations and running up utility poles or outside of buildings.

P&C Flex™ is available in sizes 3/4" through 4", with or without pull tape (1" through 4" only) and comes in a variety of convenient standard put-ups.

Features:

- Accommodates any degree of bend — ideal for shallow trenches
 - For use with HDPE — Use ELA_ Series Fittings
 - For use with PVC — Use E940_ Series Fittings
- Easily handles offsets
- Manufactured to IPS dimensions — can be used with standard IPS coupling/fittings
- UV resistant
- Can be used as a flexible sweep or raceway — one SKU can do multiple bends
- Available in sizes 3/4" through 4"
- Small put-ups for easy handling

NOTE: Not UL Listed.

For other radius sweeps use this formula: .0175 x Radius (inches) x Angle° = Required length of P&C flex in inches

Carlton®

P&C Flex™

Technical Information

When soil conditions do not permit direct burial of cable, use Carlton® P&C Flex™ Non-Metallic Corrugated Conduit to protect the cable. A lower coefficient of friction provides easy wire pulls on location. Flexibility eliminates the need for elbows.

P&C Flex™ conduit is flexible. Carlton® P&C Flex™ Non-Metallic Corrugated Conduit is used to transition from Carlton® P&C Duct Type DB. Despite equipment being mounted away from the pole, P&C Flex™ conduit remains flush to the pole.

Carlton® P&C Flex™ Non-Metallic Corrugated Conduit protects control cables in supervisory control and data acquisition equipment (SCADA) in distribution substations. Flexibility provides maximum utilization of equipment.

Suggested Applications

- Carlton® P&C Flex™ Non-Metallic Corrugated Conduit is the most versatile system available for power and communications applications
- P&C Flex™ combines high crush strength with flexibility. Longer coil lengths reduce installation time

Here are a few application ideas that illustrate how P&C Flex® can be effectively used:

In single-phase underground primary systems, lower the cost of direct buried and standard conduit systems by installing P&C Flex™ Non-Metallic Corrugated Conduit with a vibratory plow.

Digging up faulty cable in frozen ground can be expensive and time consuming. Use Carlton® P&C Flex™ from the customer service raceway to the temporary service pedestal to restore power on an interim basis. When the service length is more than 250 feet, use a splice box and an additional length of P&C Flex™ Non-Metallic Corrugated Conduit.

P&C Flex™

Installation

Incorrect Method

Correct Method

Lay conduit in the trench as straight as possible. Avoid undulations up and down and side to side.

Trenching

1 Trenching

Trench should be graded true and free from stones or soft spots. Backfill should also be free of stones and be firmly tamped around the sides of the conduit to develop maximum supporting strength. Tamping on top of the conduit is not recommended.

2 Backfill

In rocky soil where it is impossible to have an even trench bottom, a selected backfill should be put in before laying the conduit. Selected backfill (not tamped) at least 6" over the top of the conduit is recommended. After final backfill is placed, tamping may be used to finish the grade.

3 Duct Placement

Duct may be unreeled directly into trench or along side trench and subsequently placed in trench. After placing in trench, secure one end and stretch it by hand to take up the slack. Spot backfill to hold in position. Do not use mechanical stretching equipment.

4 Changes in Direction

Avoid unnecessary turns, dips or changes in direction. Keep bends as gradual as possible to ensure ease of cable pull-in after duct installation.

5 Pneumatic Rodding

All commonly used vacuum or pressure rodding equipment can be used to rod P&C Flex™. The line carrier (mouse, puck, rocket) should be soft, flexible material designed to fit snugly into duct without interference.

6 Mechanical Rodding

All commonly used mechanical rodding equipment can be used to rod P&C Flex™. The tip should have a ball-type arrangement to keep rod from catching in the convolutions on the inside of duct.
